

Using social innovation and mobile technology to build a world where everyone is on the path to thriving

Thrive Lights is the US leader for the Global Stoplight movement, a partnership of more than 300 organizations that utilize the Stoplight Survey tool and to support people on their pathways to thriving.

The Stoplight survey tool employs a multidimensional self-assessment survey combined with a process that allows those who take the survey to chart their own course to thriving.

Dimensions and Indicators

The Stoplight survey covers six dimensions of life with 50 indicators; for each indicator, participants chose whether they are at the red level (suffering), yellow level (surviving), or green level (thriving).

Stoplight Community

We work with organizations from different sectors around the world and bring together a network of powerful actors with one clear mission: a world where everyone is on the path to thriving. The Stoplight is implemented by governments, private companies, small and medium-sized enterprises, non-profits, cooperatives, microfinance organizations, academic institutions, and sports clubs, among others.

Become a partner!

The Stoplight Community convenes different stakeholders, from implementing partners to strategic allies, to create a space for learning and cooperation. There are two partnership models for joining:

Stoplight Hubs

These partners represent and distribute the Stoplight in a specific geographic area. They have sufficient capacity to secure and train local partners in order to integrate this tool into their programs.

Pilot Projects

These partners implement the Stoplight within their programs. Unlike Hubs, they do not represent or distribute the Stoplight, but rather work on empowering their own participants.

How it works

1

Join the movement!

Thriving is a collaborative effort. Stoplight partners receive access to the technology platform to map thriving in their communities and receive training to start implementing the methodology.

2

Adapt the Stoplight

This is not a program in itself, but rather a tool that can be integrated into a Stoplight partner's existing operations. Adapting the indicators to make them relevant to the local community is also key to optimally implement the Stoplight.

3

Administer the survey

Surveys can be administered using the Stoplight technology platform, either on smartphones, tablets or computers. When the survey is finished a clear picture of a family's strengths and weaknesses is created.

4

Enable solutions

Families choose their priorities and work to design their path to thriving strategies. Partners can use aggregated data to implement interventions that benefit entire communities.

5

Progress update

After working on their solutions, families update their survey and choose new priorities. Partners, on their side, can monitor the results and learn from successful strategies and interventions.
